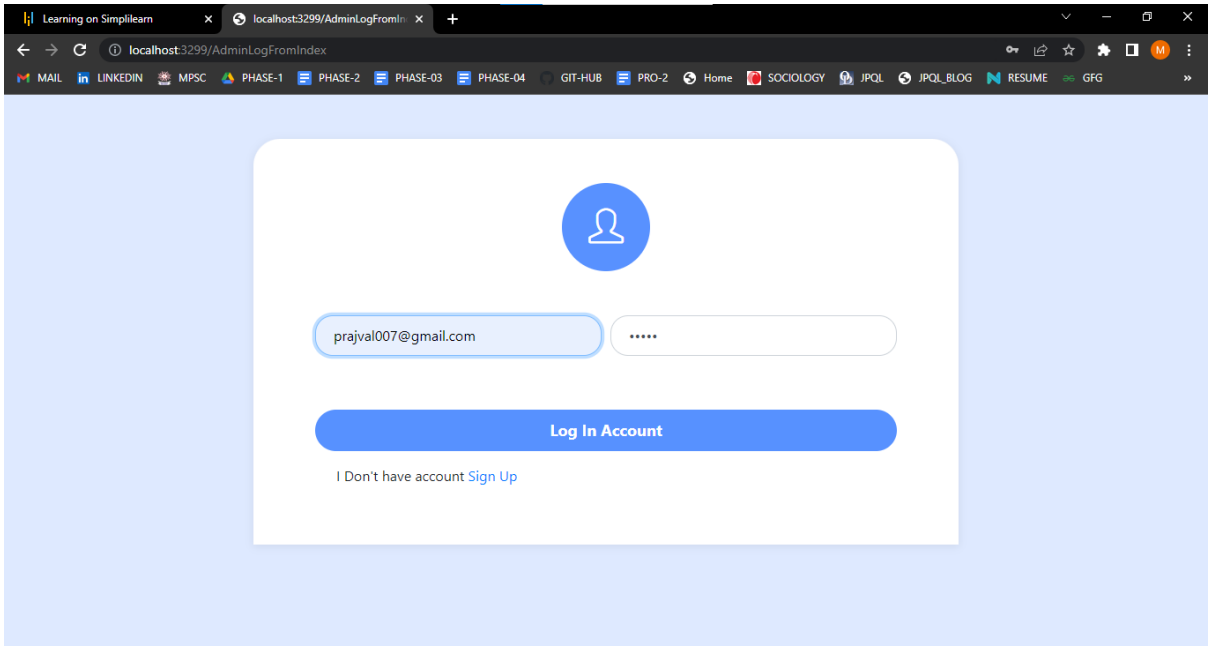
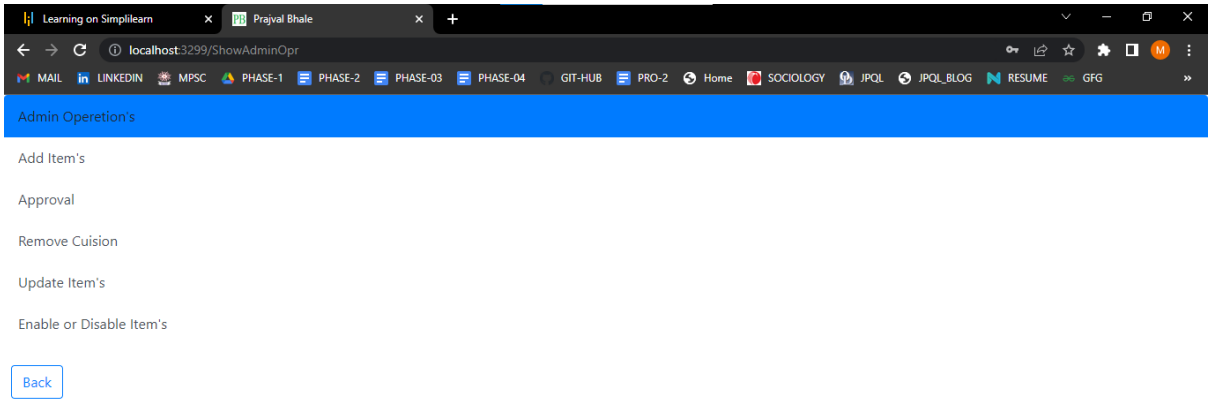
03]. Admin:

When user click on this option they can not access this one because here I apply some login Authentication for Admin after gives Authenticate credential's Admin only can enter:

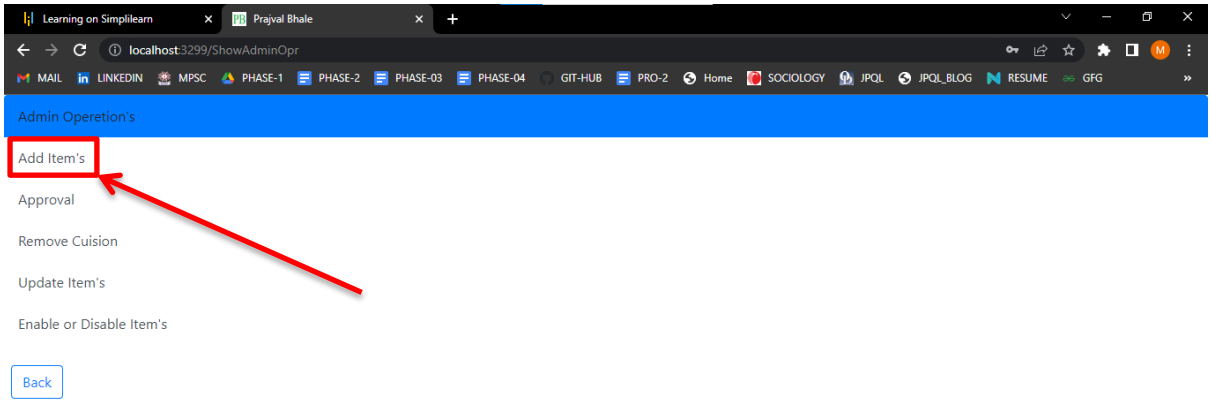


When credential's are right then Admin will redirect on following page but admin gives Bad Credential's then they will not go further they stay on that screen or home screen only they can not access that one:

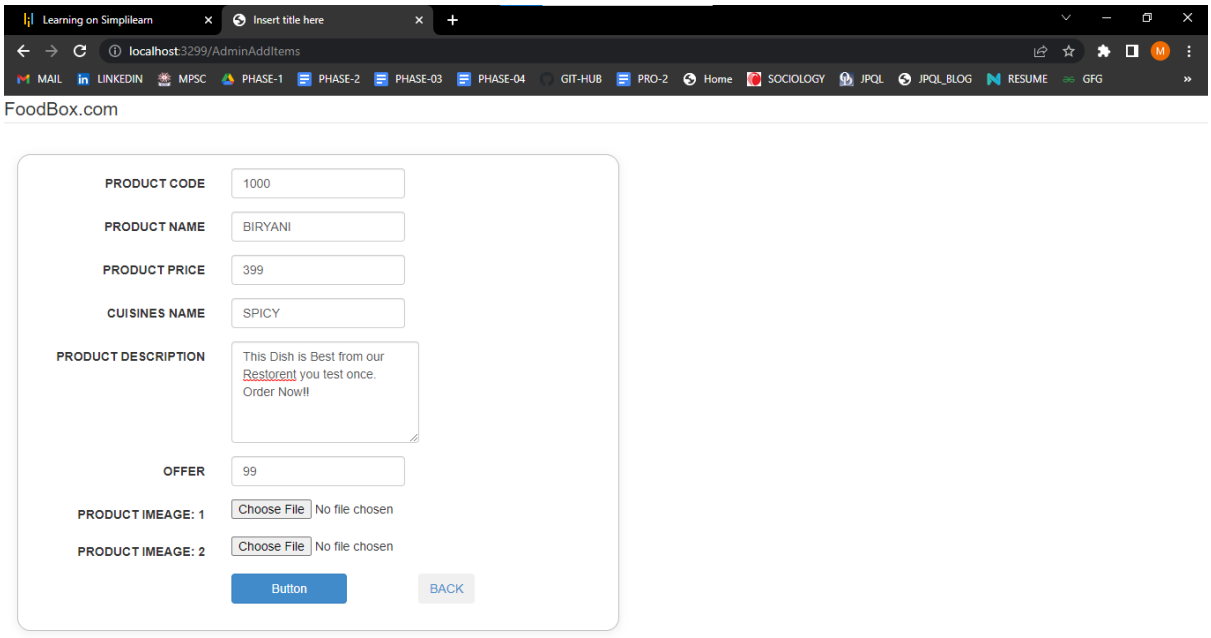


3.1]. Add Item or Product:

When admin want's to add some product's then they will goes with this option and can add his Product's after click on Add Item's Option then:

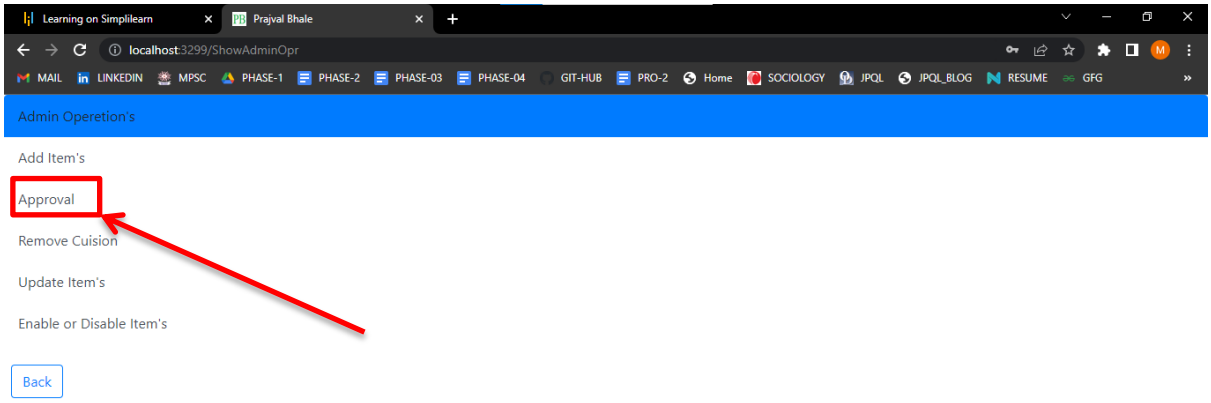


Admin will redirect on this following page and can add product:

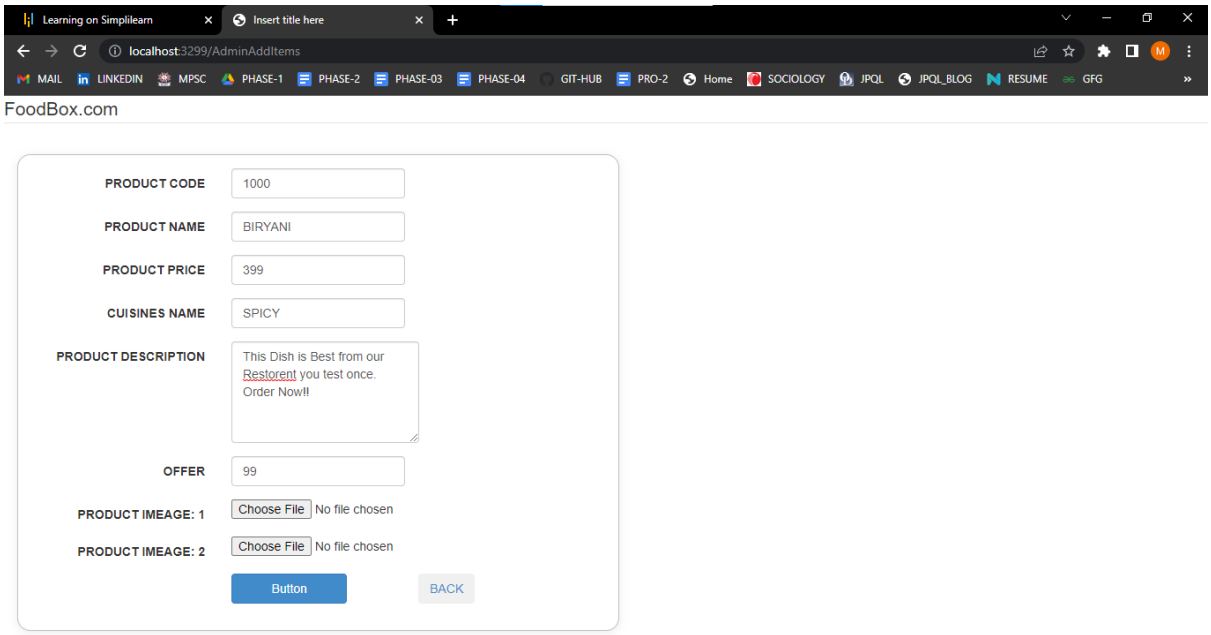


3.2]. Approves Item or Product:

When admin want's to check our product is Successfully Added or Not then they can go with this option also Enable or Disable the product if Admin want:

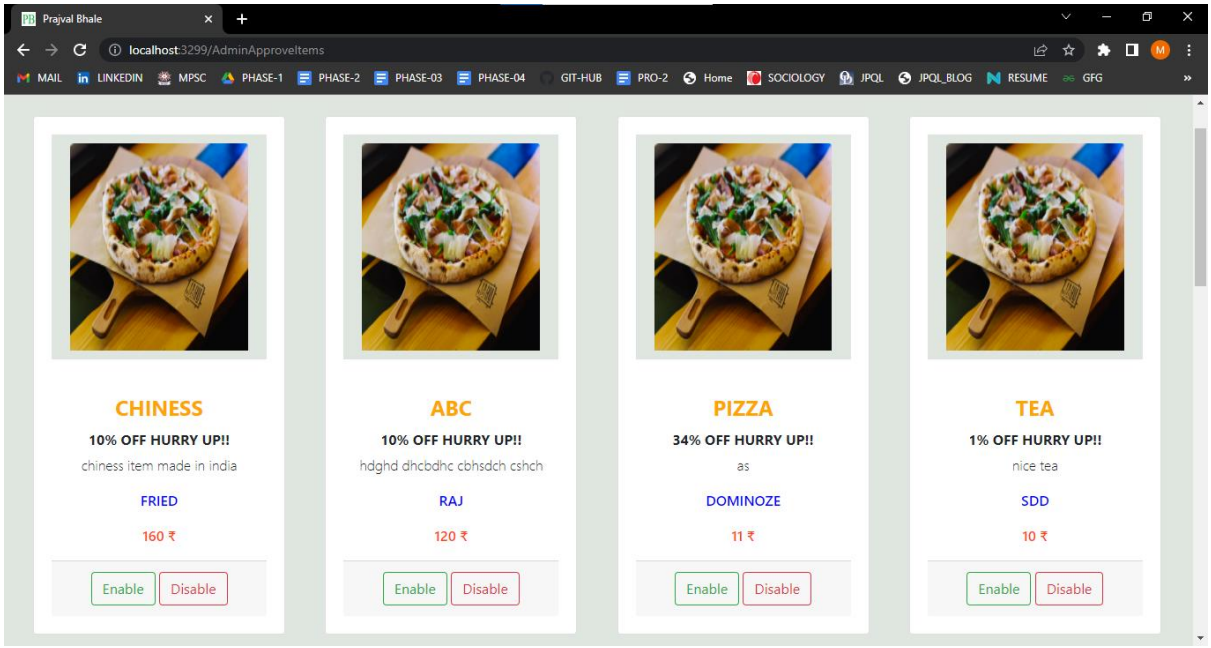


After click on this option Admin will redirect on following page after we submit this details we receive some Successfully added message from system:



3.3]. Approves Item or Product:

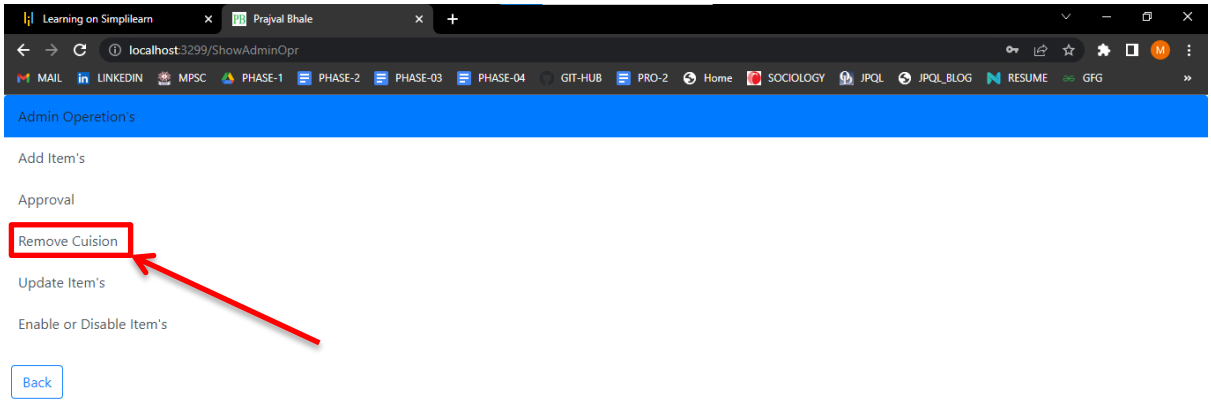
Here admin can Enable or Disable the item's like following:



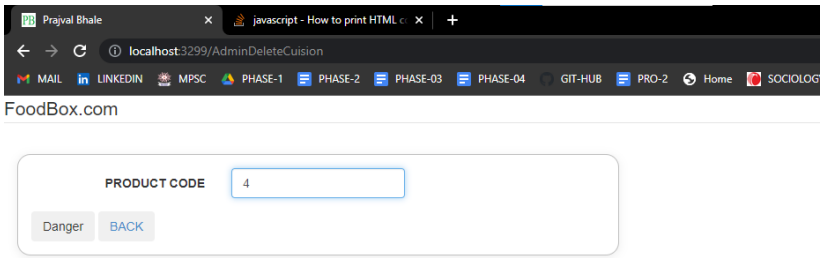
From here admin can Enable, Disable or Search any item like above.

3.4]. Remove Cuisine:

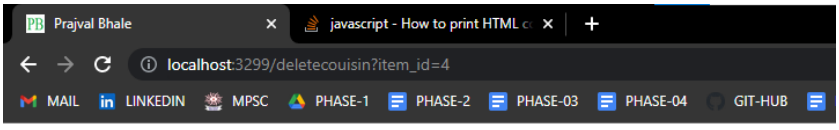
By using this option admin can delete Cuisine's by his ID when Admin click on Remove Cuisine:



After click on this option Admin will redirect on following screen and but Admin have to know which product Cuisine we have to delete then put that Cuisines ID then admin can delete like Following:



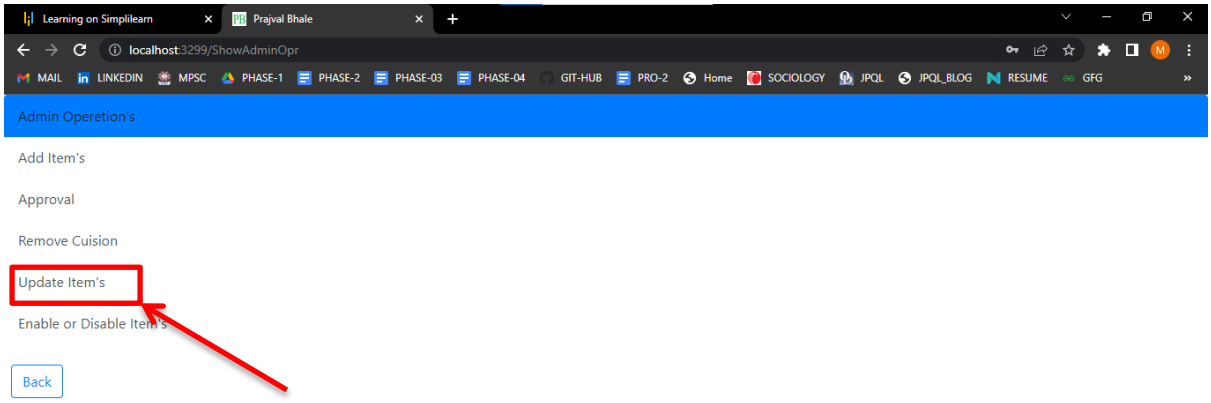
After Removing Successfully admin got following meassage:



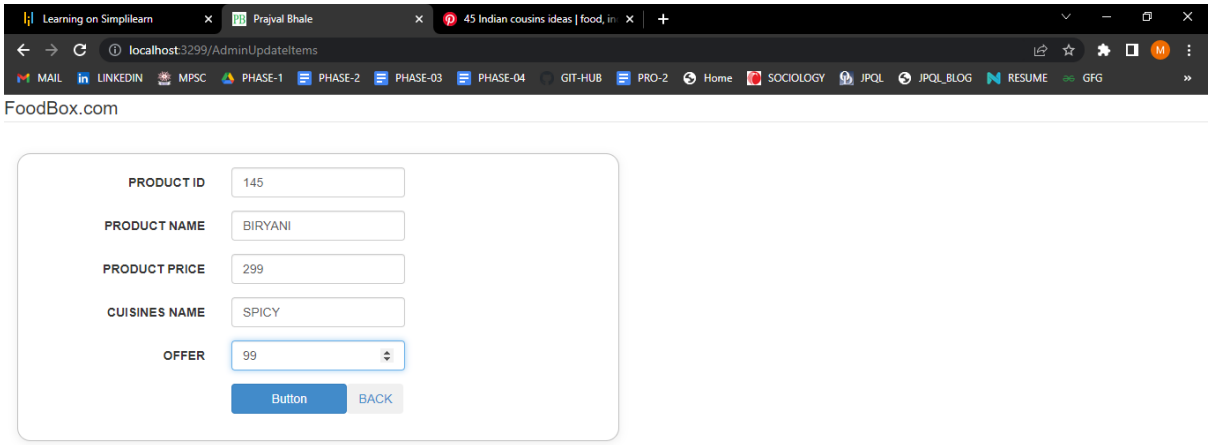
Couisin DELETED SUCCESSFULLY

3.5]. Update Item or Product:

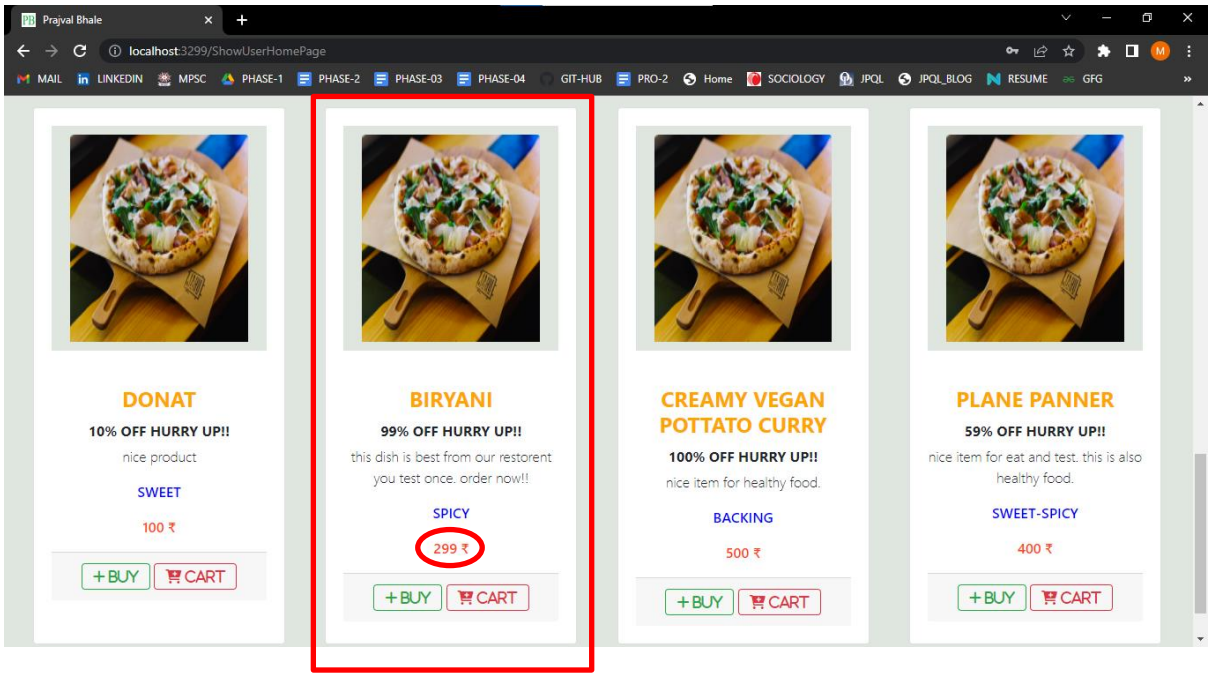
What happen if admin will put wrong information or any wrong data ? then admin can go with this option and can Update or Edit that wrong data by Using that Product or item's ID:



When admin click on this option then admin will redirect on following page and admin can change it by according to him/her we change our previous product which we added at begining:

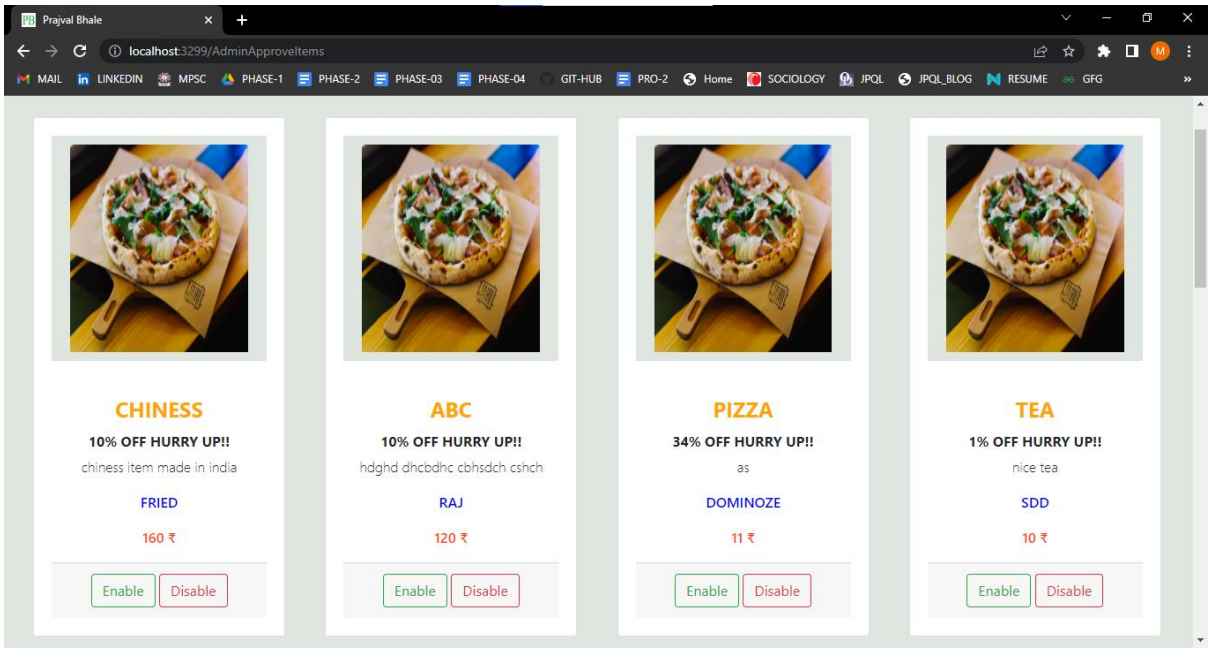


Following is updated screen after admin perform update action:



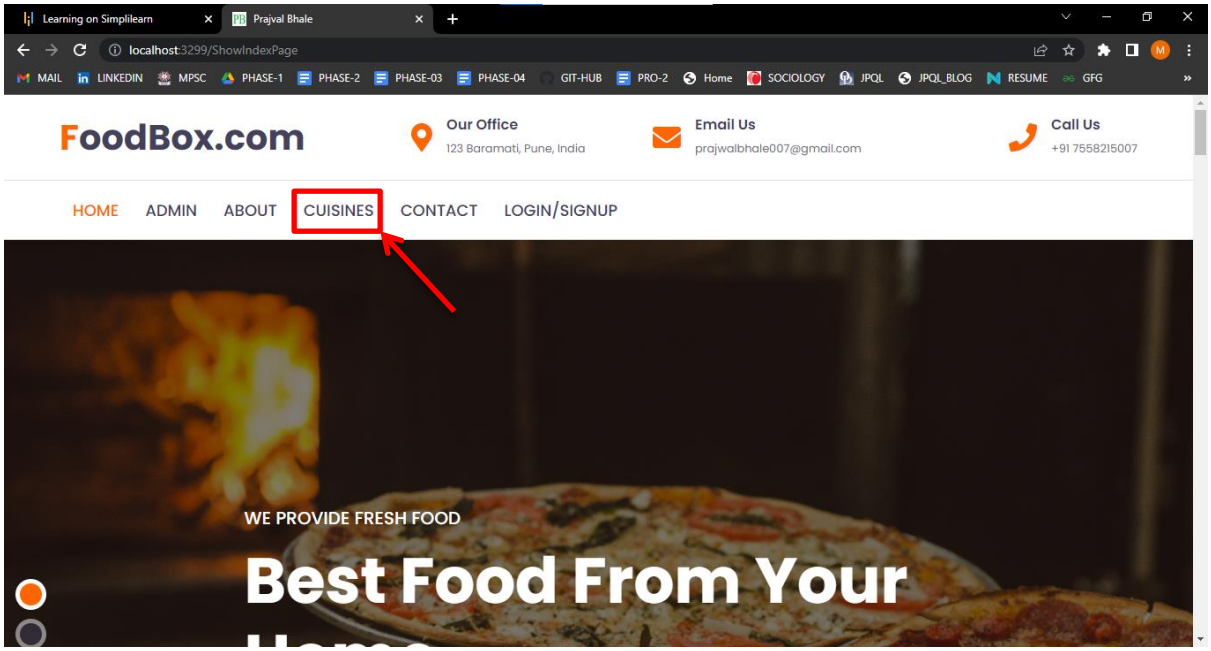
3.6]. Enable or Disable Item's or Product:

By using this option admin can enable or disable the unnecessary product just click this Enable or Disable, admin can enter into this option by using Approve Item or Last Option Enable or Disable Option when admin click on last Enable or Disable Option then Admin will redirect on following Screen:

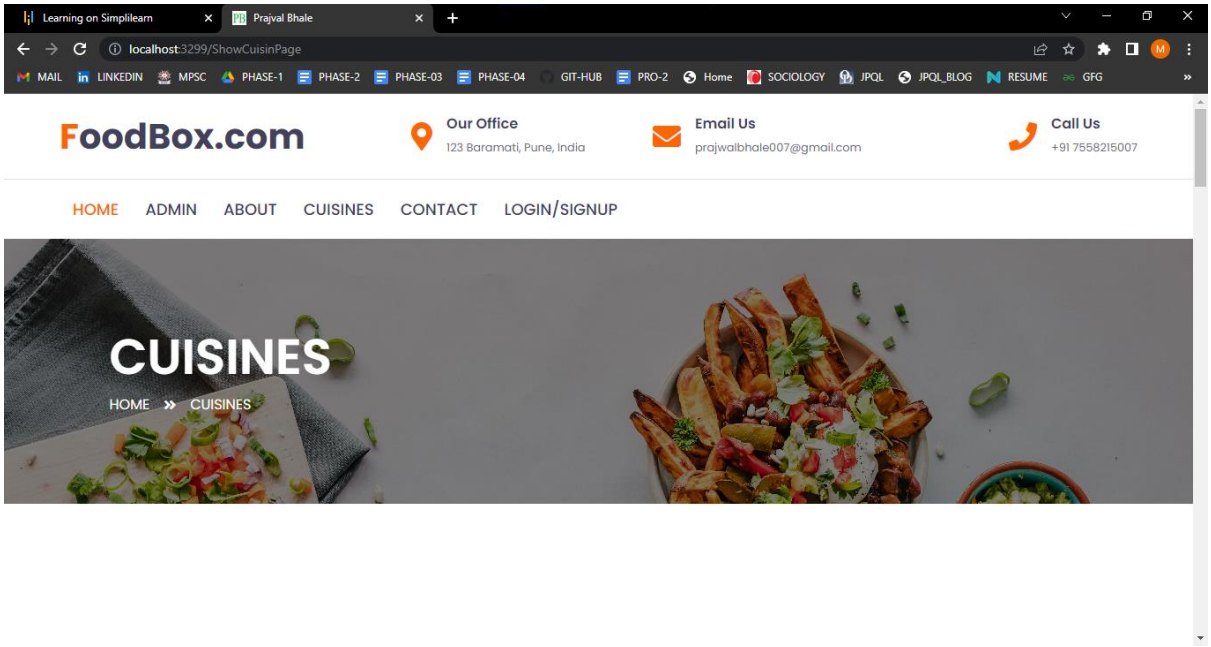


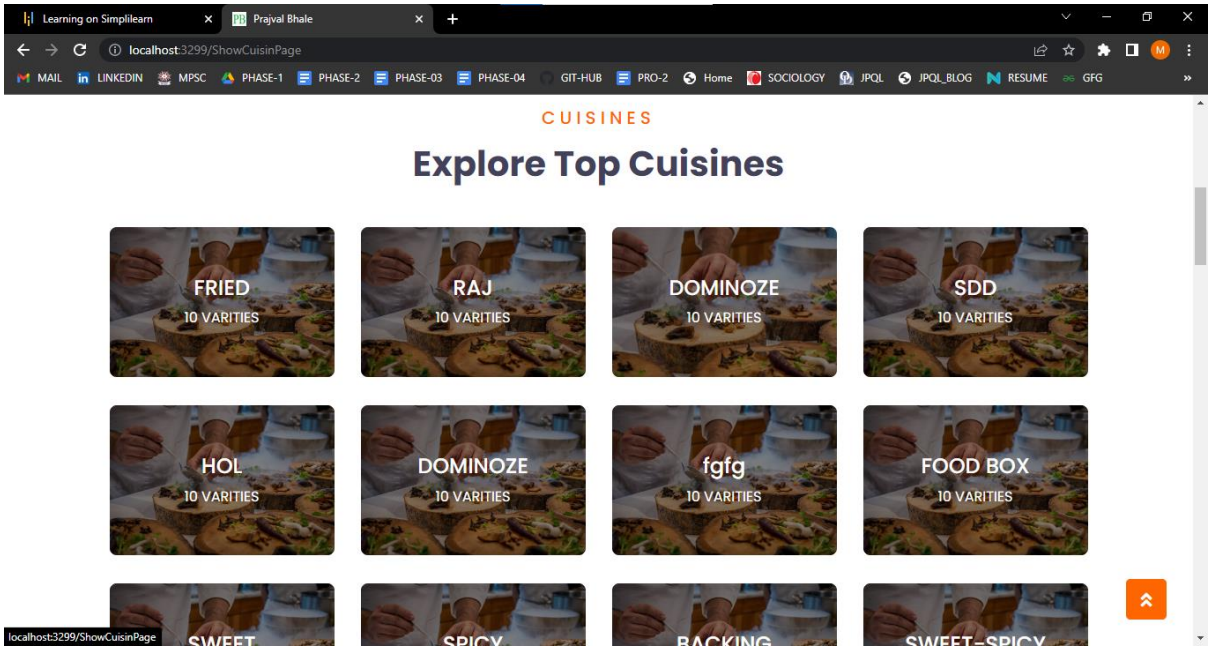
04]. Cuisine:

When user want's to know how many cuisines are there in portal so they can go with this option and can see, when user click on cuisines:

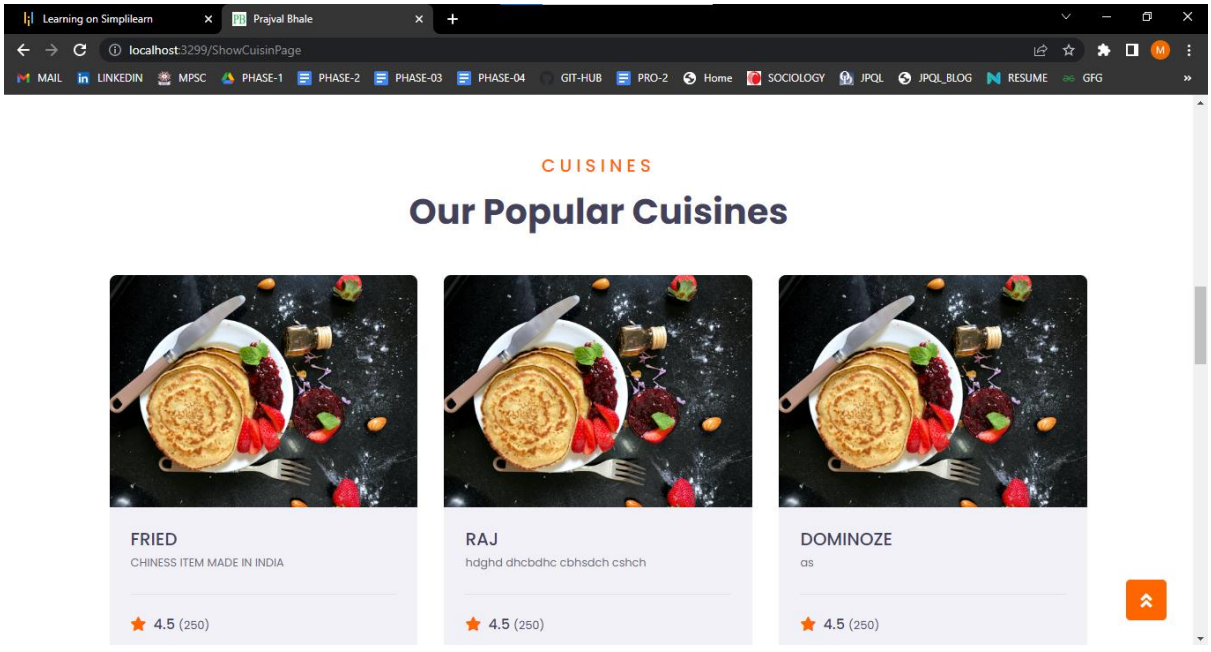


After user click on this option they will redirect on following page and can see cuisines:



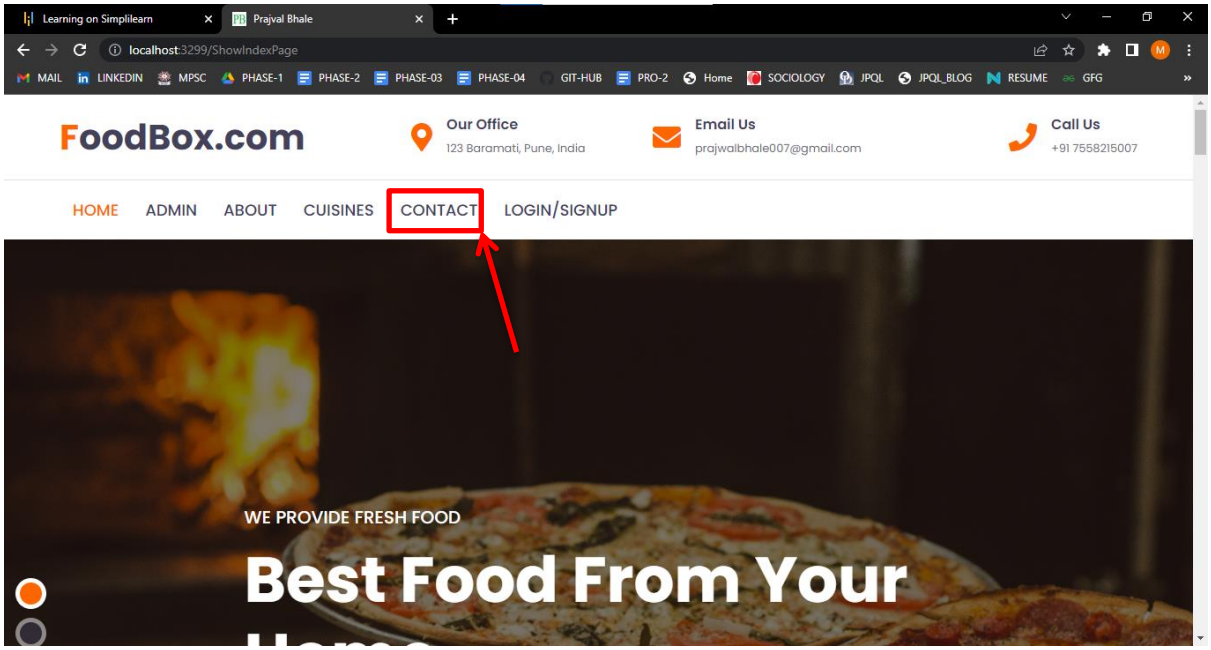


This page also contains some top most Cuisines for our Customer's, if they want's to buy this they can go with this but login and sign up is required thing's:



05]. Contact:

When user or Admin or any one who wants to contact with us they go with this option as well, when they click on CONTACT they will redirect on following screen:



After they click on contact they will redirect on this page:

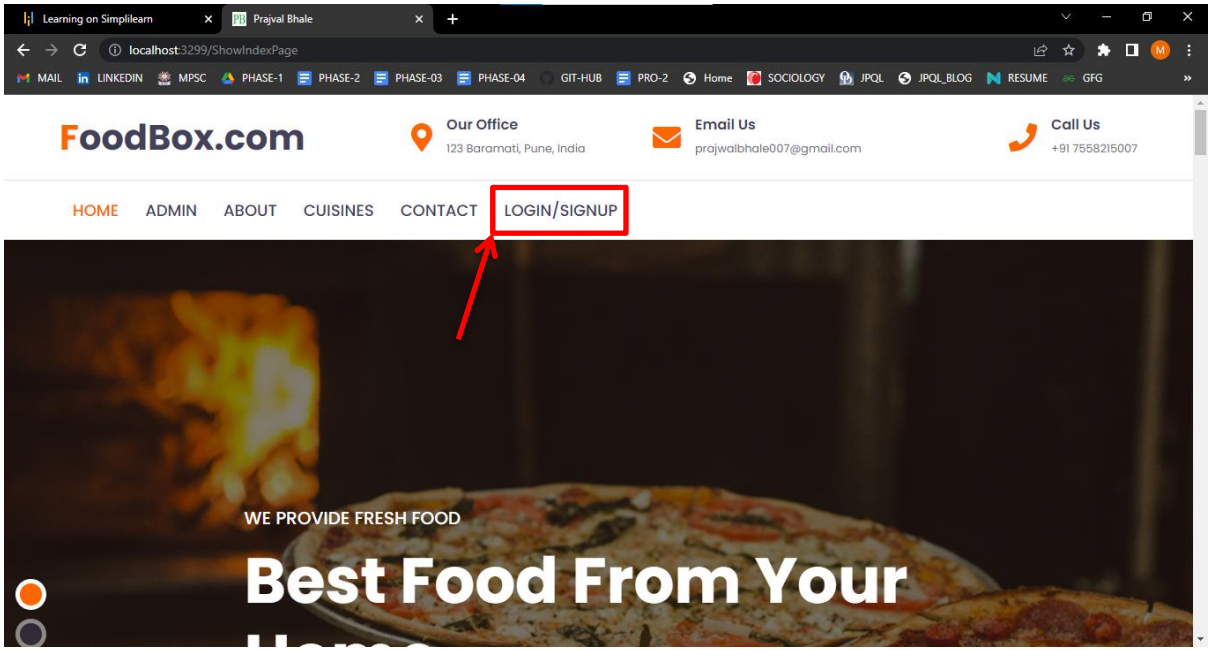
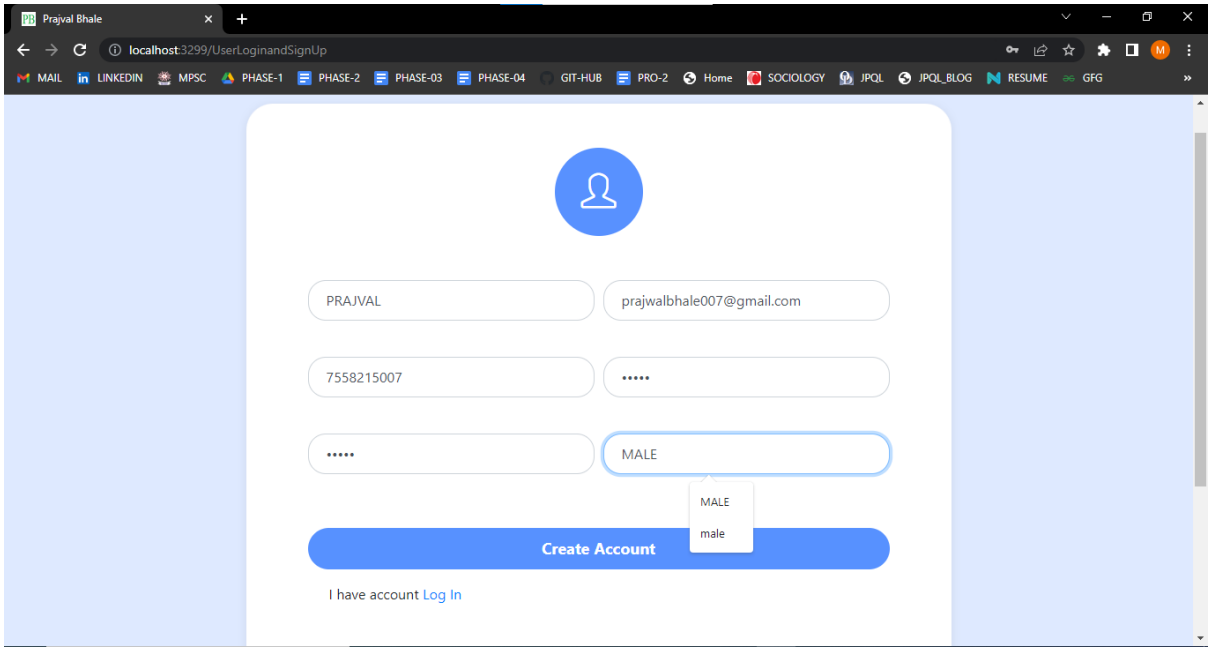
06]. Login/Signup:

if user wants to create or login into the Application then they will go with this option, if user click on this:

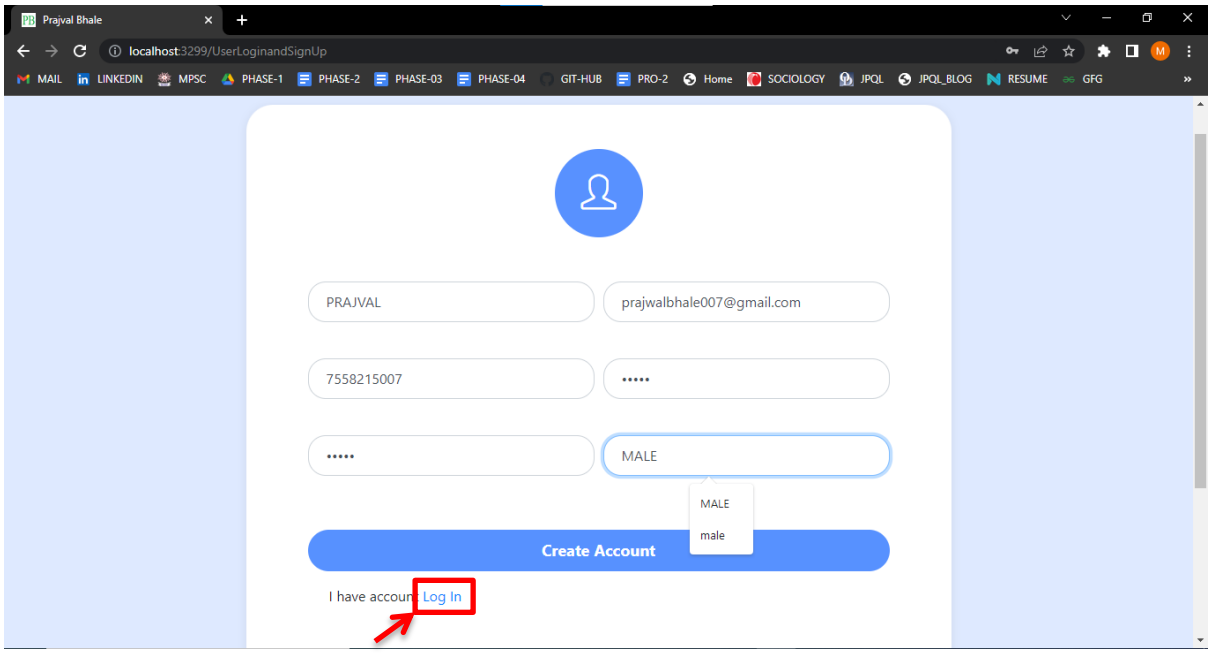


Then the user will redirect on following screen:

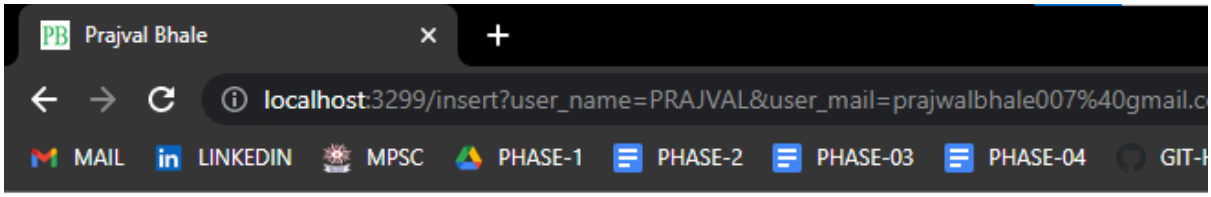


6.1]. Login/Signup:

If user is new on this page then they will first sign up then they can login with their mail as username and password, by click on login:

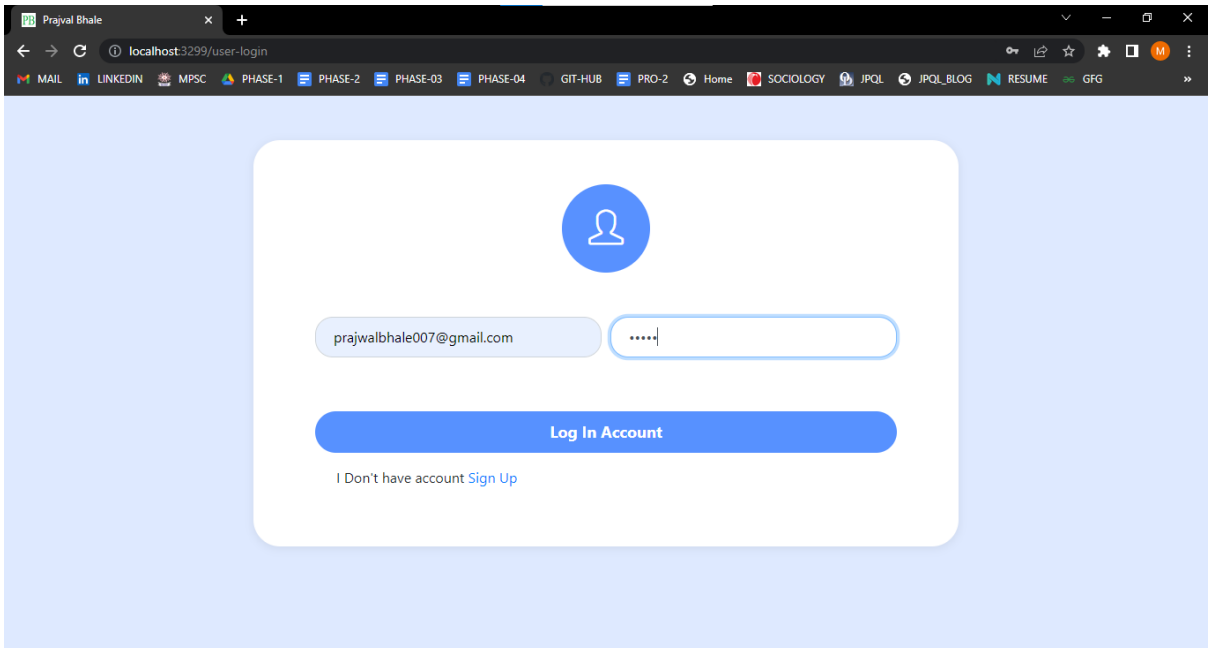


When user done login then they will see this page of Successful Login.

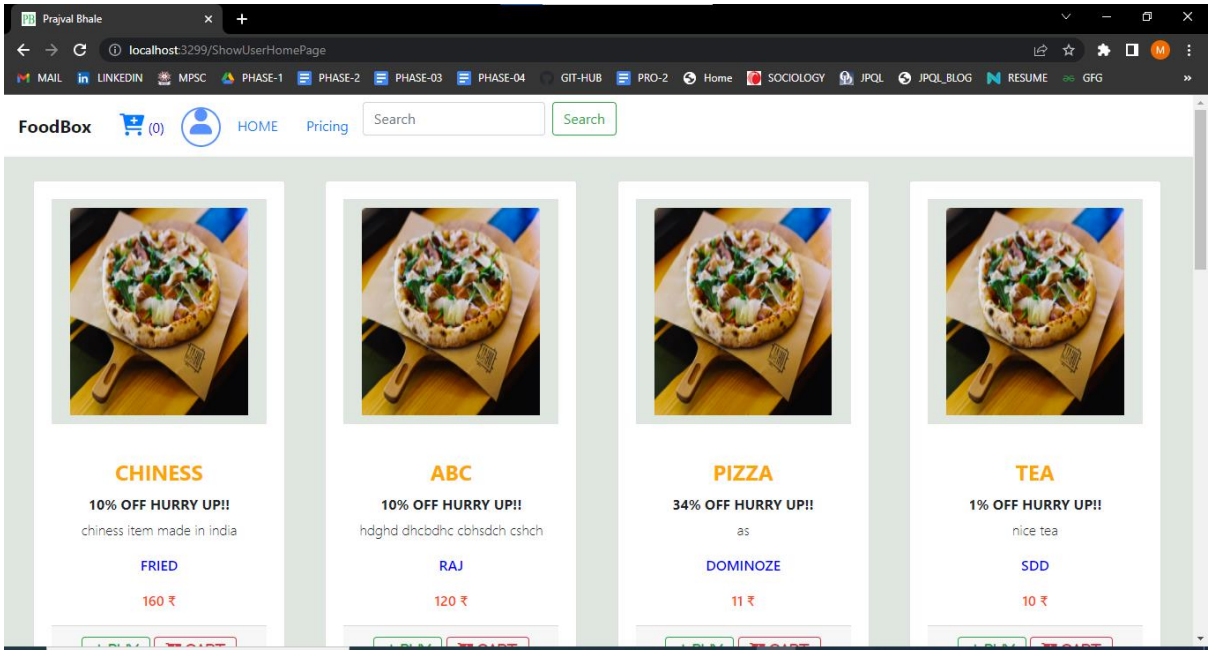


USER REGISTERED SUCCESSFULLY

after sign up complete user must be do login by click on this Login option when user click on that then user will redirect on following screen:

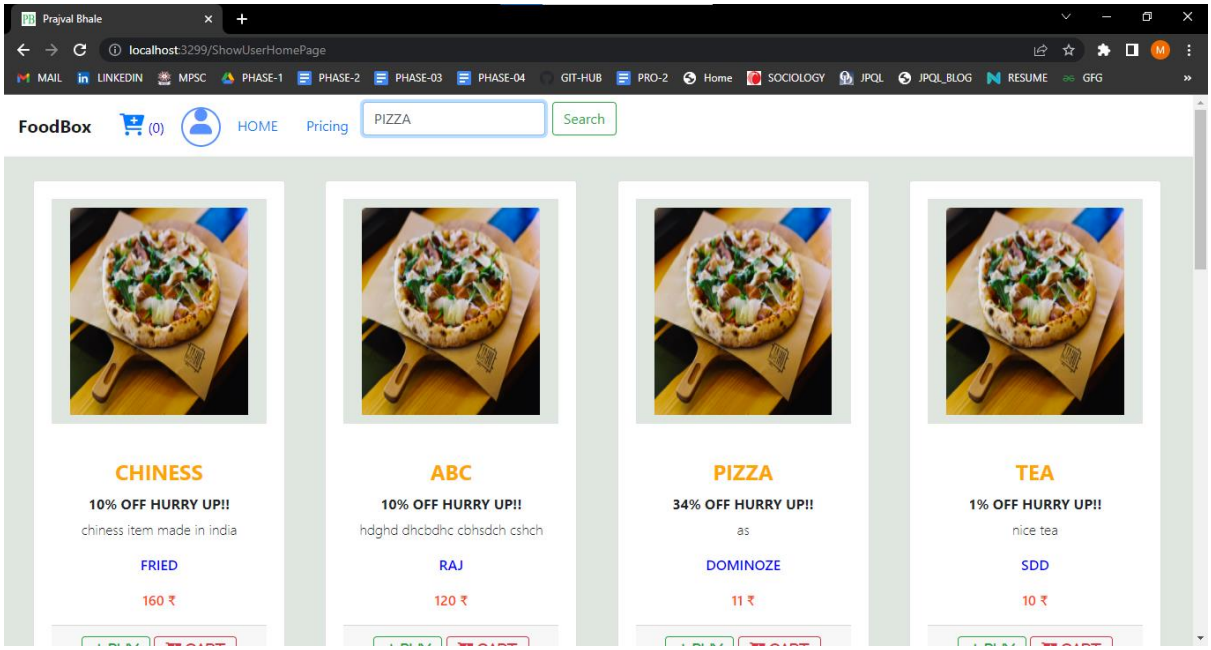


If login credentials are right then user will redirect on home page:

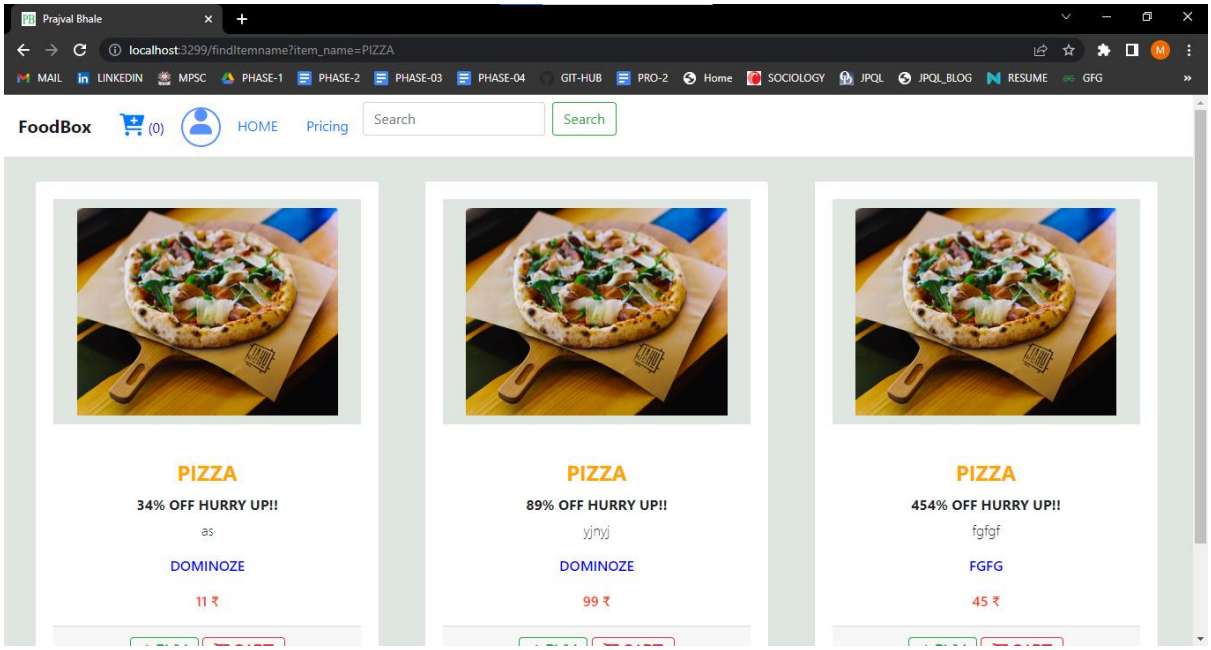


6.2]. User Home Screen:

When user login successfully then user will redirect on following screen which is home screen on this screen user can search Item, if item is present then this will show otherwise it's not shown see following:

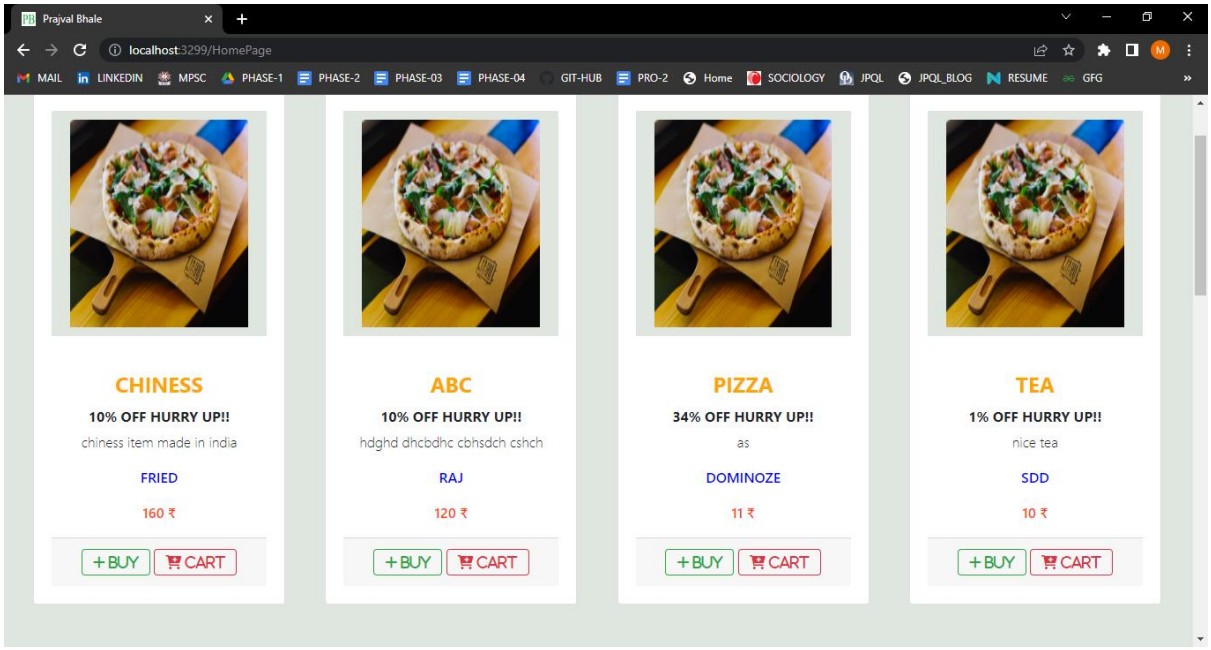


When user search for pizza or any item which they want then they can search if item is present then item will shown other wise it not shown anything like following when we search pizza then result is:

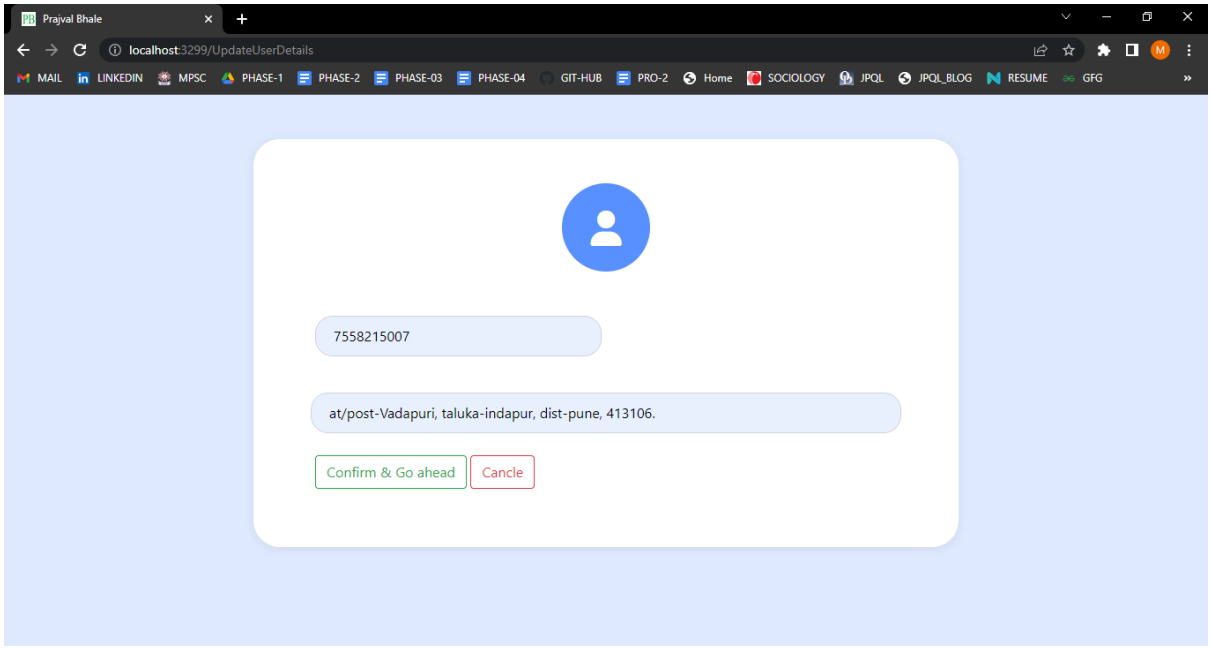


6.3]. Buy:

If user want's to buy anything then they simply click on Buy Button and do further Process like:



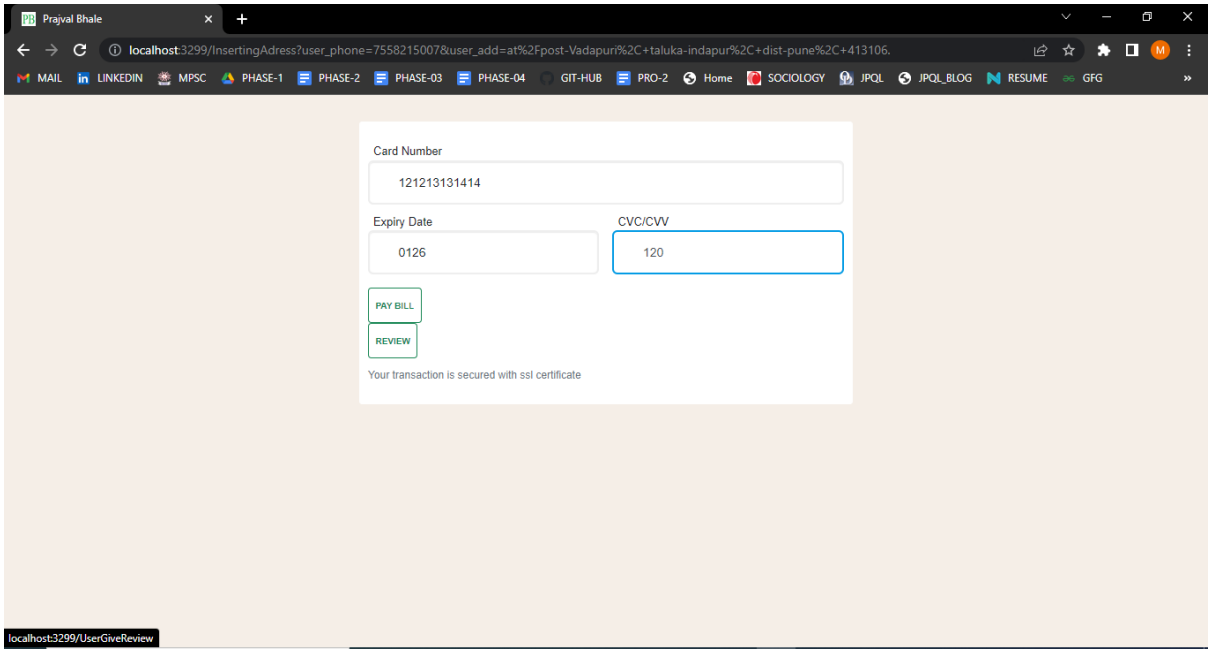
User click on Buy then user will directly redirect on following page which is conform phone and Address details:



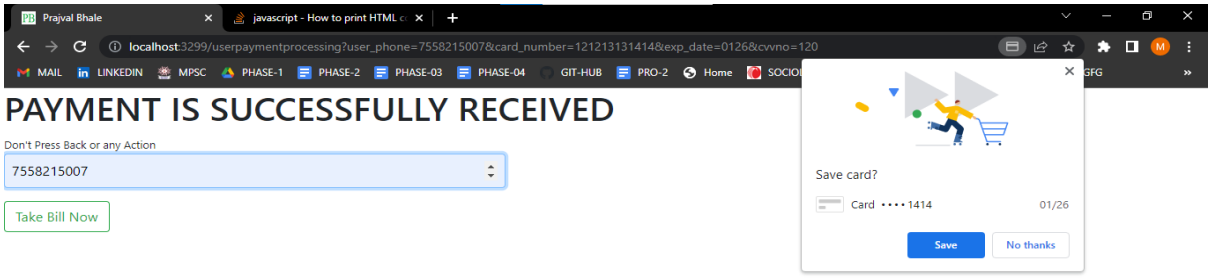
After fill this detail's then user will directly redirect on payment gateway:

6.4]. Payment:

After user conform above detail's then user will redirect on payment form, now user can place his order after payment like following page:



After we done this payment then we will redirect on billing page, there we can take our billing detail's after giving Phone Number like following:

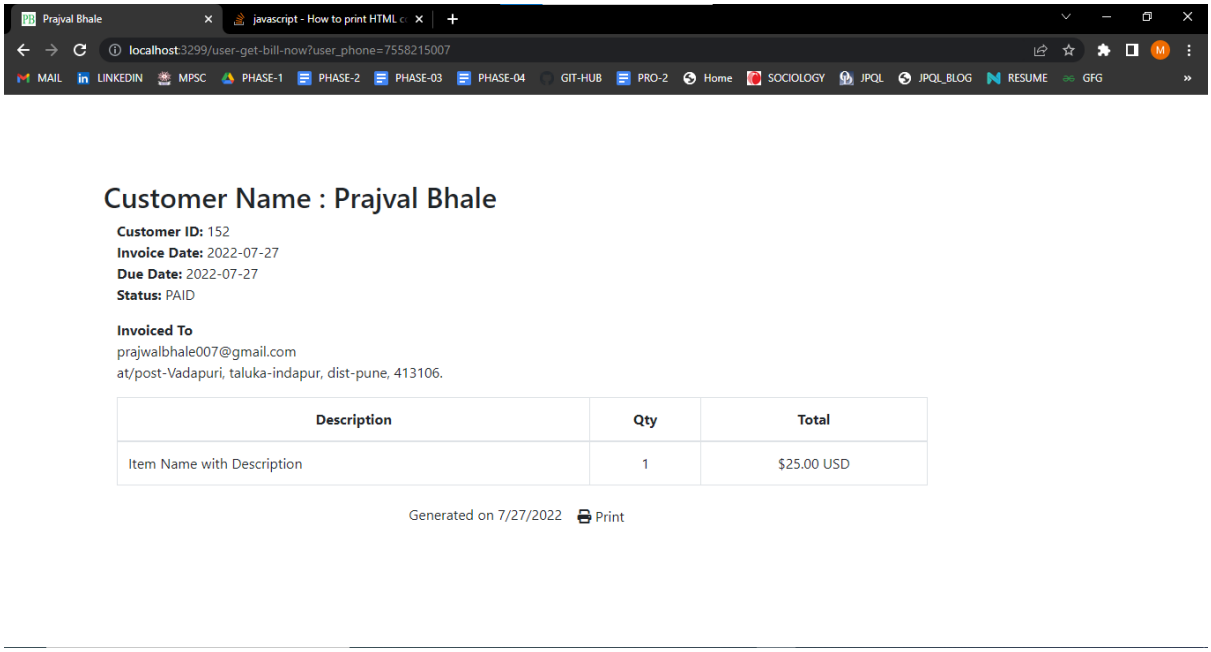


Here user can also save his card.

NOTE: User should be put Only Registered or Payment Phone Number Only.

6.5]. Bill:

If we want a bill then follow above process and put your phone number and you can get your Bill and also you can print this in your device like follow:



THANK YOU…….
